

Product Management Update

Mike Hellers – Product Development Manager

LINX Portal update

LINX Portal Update

- 2FA authentication for portal logins
- New UI/UX prototype completed together with an external agency
- Implementation phase started in January
- Two focus areas:
 - New UI/UX, prep work to add additional features/functionality
 - Performance improvements, including stats area (changes to backend)
- Target timeline:
 - Internal beta of base functionality using new framework end of Q1
 - External beta/launch with base functionality end of Q2/early Q3

Welcome back, Vanessa

LINX Interconnection Product Updates

PVLAN and Closed User Group products

> Private VLAN

- > Point-to-point link between 2 members
- > Can be provisioned on existing ports (converted to dot1q tagged port) or on dedicated ports depending on use case
- > Bandwidth based price for member ordering the service
- > 30 day cancellation notice

> Closed User Group

- > Allows exchange of traffic with two or more other members
- > Bandwidth based pricing
- > 30 day cancellation notice

PVLAN and Closed User Group products

- Option to remove MAC address limit
- MTU currently limited to 1500 bytes (same as peering LANs)
 - Option to allow larger MTU sizes to increase number of use cases for these products (Q2/21)
- Availability on other Exchanges (Q2/Q3 2021)
 - LON2: testing and validation completed in 2020
 - LINX Manchester move to Edgecore/Ipinfusion and NCA (Config Automation) enables us to bring these products to Manchester
 - LINX NoVA has been brought under NCA control in 2020

LINX Cloud Connect

- Launch Cloud Providers:
 - Microsoft ExpressRoute, Azure Peering Service
 - Amazon AWS DirectConnect
- Backend systems, Config automation, and portal functionality completed in December 2020
- Continuing to work with both Amazon and Microsoft to bring direct interconnects (onramps) into service to fully enable the product

Thank you

 mikeh@linx.net
