-  **Route Server Update** 

# 2023 Technology Investments

## 2023 Technology Investments

- LAN Interconnectivity Development – LON1
- Develop the 400GE offering
- Reduce the legacy footprint
- Reduce the power draw per Gb of member capacity
- Improve the port density
- Reduce support cost based on deployed network asset value and member capacity

LINX LON1 max 30d

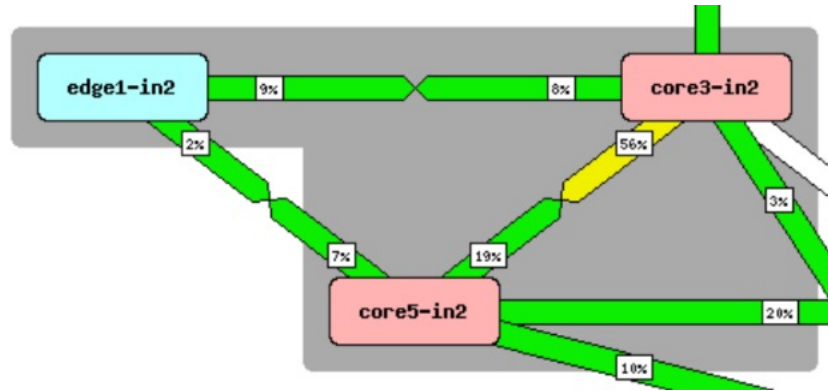

Complete the LD6 re-design project, Equinix Slough

1. Install Nokia 7750 SR-7s as edge5-eq4
2. Enable 400GE member services
3. Migrating 100GE members from edge3-eq4 and edge4-eq4
4. Decommissioning 2 x MX960s
5. Assigning addition ISL capacity to edge1-eq4

LINX LON1 max 30d

Develop the Digital Realty site (IN2/LON2)

1. Enable 400GE member services on the Juniper MX10K using the LC9600 card in core3-in2
2. Test the MX10K-LC480 card for 1/10GE services
3. Collapse the edge1-in2 into core3-in2
4. Decommissioning edge1-in2

LINX LON1 max 30d

## 2023 Technology Investments

2nd half of 2023, there will be a wider review of all lower speed member ports, 1 GE and 10 GE member services

Two PoCs underway

1. The **Nokia Ethernet satellite SAS-Sx**. This support feature allows a 7210 SAS-Sx or SAS-S chassis to act as a port extension for the 7750 SR host.
2. The **MX10K-LC480** which is a fixed-configuration line card with 48 SFP/SFP+ ports. Each port supports a speed of 10 Gbps or 1 Gbps, providing the line card a maximum bandwidth of 480 Gbps.

## 400GE LON2

linx | PIs | PORTS | NETWORKS | TECH-DATA | CRM | Search service #... | [EDIT] [DELETE]

### edge6-eq4-lon2

Switch

Name	edge6-eq4-lon2	OS Type	ocnos
Building	<a href="#">EQ4</a>	OS Version	6.1.1-21
PoP	<a href="#">EQ4-lon2</a>	Loopback IPv4 Address	10.0.2.32
Fabric	LINX LON2	BGP	Disabled
Peering LAN	lon2		
Hardware Vendor	Edgecore		
Hardware Model	AS7946-30XB-O-AC-F-UK		
Status	provisioning		
Role	edge		
Management IPv4 Address	192.168.10.109

### Ports

[UPDATE PORTS](#)

## **Operations Update – Anne Bates**

- Service Issues
- Maintenances

## Service Issues – Restart of Alice LON1

March

LON1

- 8 March 2023 - BGP collector sessions dropped
  - BGP drops identified via Alice which was returning an error for IPV4 on LON1, IPV6 was unaffected.
  - The BIRD daemon for IPv4 peering on the LINX LON1 Collector crashed and was restarted successfully.

## Service Issues – Virtus vPoP

### March

#### LON1 & LON2

- 14 March 2023 - Loss of connectivity to Virtus vPoP
  - This affected all five members connected.
  - Root cause identified as an issue with the data centre cross connect, outside our suite connecting the dark fibre.
  - A transmission PoP runs on a single fibre connect back to our THN site. Hence, any outage on this fibre results in a complete site outage as no redundancy currently built into transmission PoP solution.
  - The restoration came with Telehouse engineers working on the cross connect along with EuNetworks on their optical equipment.

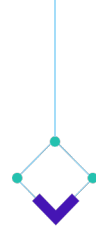

## Service Issues - core3-tch FPC6/FPC7

March

LON1

- 19 March 2023 - [Emergency At Risk] core3-tch FPC6 card replacement (maintenance that became an outage FPC7)
  - The FPC6 card on core3-tch in Equinix LD8 went offline, and we were advised by the vendor to replace the card as errors were incrementing indicating a potential hardware failure.
  - Another ISL card(FPC7) on the same switch started logging errors and silently dropping traffic.
    - It is believed that FPC7 and the corresponding fabric may have been disturbed whilst FPC6 was replaced causing the errors, and subsequent drops.
  - This affected a significant number of member sessions peering with RS1, RS3, route-collector and direct peering with their traffic transiting FPC7 or having their ports directly connected on core3-tch switch.

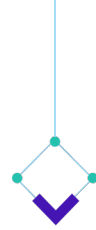

## Service Issues - core3-tch FPC6/FPC7 cont.

- After identifying the issue was related to FPC7 reporting fabric chip errors on multiple planes the card was rebooted resolving the issue.
- Caused by a bug, described as; when CRC errors are observed on the fabric plane traffic utilizing that plane may continue to discard traffic until the FPC or impacted fabric plane is restarted.
- Juniper were unable to recreate the issue in the lab by pulling adjacent card, only by manually injecting the CRC errors, so chances of a reoccurrence has been confirmed as very low.
- The bug is due to be fixed from 21.4R3-S4 onwards (currently on 21.4R1-S3) and will available when we upgrade later in the year.
- Work around if issues re-occurs - off-lining/on lining the impacted fabric plane to restore traffic, rather than requiring a complete FPC reboot.

## Service Issues - core3-tch FPC6/FPC7 cont.

### Learnings

- Issue took longer to resolve than on average, plus the member communication wasn't to our normal level
- FPC7 silently discarding traffic when FPC6 was replaced during a routine maintenance window
  - Time was spent troubleshooting FPC6 as the maintenance was on that card
  - As it was a Sunday and NOC cover being low due to holiday taken, the on-call Network Engineer found it difficult to complete physical work along with troubleshooting the issue, sending out communications and keeping an eye on monitoring

### Actions

- Reinforced with Network Engineers and NOC Engineers to escalate when assistance is needed
- Continuing to upskill our NOC Engineers

## Service Issues – edge1-in2 FPC3

### May

- 1/May/2023 - edge1-in2/edge1-in2-Slot3 Reboot
  - FPC 3 on edge1-in2 rebooted and members on this card would have seen their sessions drop briefly whilst the reboot was taking place.
  - The card came back online after a few minutes and member connections were restored.
  - Raised the issue with our vendor TAC to investigate who advised to replace the FPC and the card was replaced in an emergency maintenance window.

## Service Issues – edge1-in2 FPC3, cont.

- After the maintenance was completed, members reported that their traffic hadn't returned.
- Encountered an issue with BCP214, where the Network Engineer who completed the maintenance was unable to remove it properly.
- The issue was escalated to a Senior Network Engineer who had to implement a work around of rolling back to the configuration before BCP214 was enabled to restore service to the members who had it enabled.
- The issue was escalated with our software team to fix the bug that caused the issue (CRM call broke the data in the database and this was fixed by changing vanilla api endpoint to write BCP214 directly.)

## Upcoming Maintenances

- Route-Server Replacement – RS1.CAR1
  - Hardware replacement of the LINX Wales route-server located at Vantage Data Centres, Newport
- SCO1 Network Refresh - Member moves
  - Completing the network refresh of LINX Scotland

## **LINX Route-Server Update – Mo Shivji**

- OpenBGpd
- Bird 1.6 and Bird2
- Extended-Communities
- Stats

## LINX Route-Server Update

- OpenBGPd
  - OpenBGPd running successfully in LINX Wales and Scotland since 2022.
  - Decision to deploy in Manchester and NoVA to replace RS2's in other exchanges and RS4 on LON2.
  - Deployments were successful.
    - Issue with Extended-communities crashing the looking-glass.
    - Worked with those members to remove those Extended-communities.
  - Still working with RSSF (Route-Server Software Foundation) on improvements.
  - Aim is to have a OpenBGPd route-server running on LON1

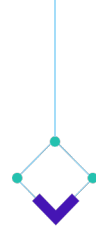

## LINX Route-Server Update

- Bird1.6
  - Currently running both 1.6.3 and 1.6.8 around LINX Exchanges
  - Has been successful since deployment in 2010.
  - Announcement for EOL on BIRD1.6.
    - EOL date set to 31 December 2023.

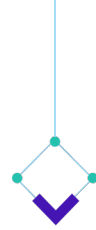

## LINX Route-Server Update

- BIRD2
  - Started on work to add this to our automation system.
    - Will begin deployment before the end of the year.
    - BIRD 1.6 EOL
    - LINX Collectors will also be upgraded to BIRD2.
    - BIRD3 Alpha release
      - Not yet tested.
      - Should work with BIRD2 configuration

## LINX Route-Server Update

- Extended-Communities
  - Attended Euro-IX Route-Server workshop at TOP-IX.
    - Removal of Extended-Communities from IXP route-servers discussed.
    - Majority of Euro-IX IXP's have removed support for Extended-Communities.
    - Upcoming RFC to be released explaining why IXP route-servers should not use Extended-Communities.
    - LINX will remove support for Extended-Communities in 2023.
    - Recommendation to use Large-Communities
    - We have and will continue to contact members who use them. So far, we haven't received any replies.

## Stats

- Route-Server Stats
  - No current stats for OpenBGPd route-servers
  - Legacy scripts in Perl
  - Have been re-written Python
  - Ready for production by end of May 2023
  - Future plans are to use some Prometheus endpoints for OpenBgpd/Bird2

Thank you!
