

Technology Update

Richard Petrie
CTO

Wednesday 21st February 2024
LINX121

-  **2024 Operations Approach** 
-  **Incidents** 
-  **LON1 Update** 
-  **Route Serves** 

2024 Operations Approach

2024 Operations Approach

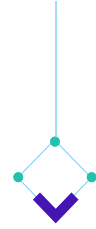

- Reflections from 2023 and how we present to the membership, on social media and at LINX events
- Evolution of LINX, our peering LANs and geographical presence
- New tools and communication

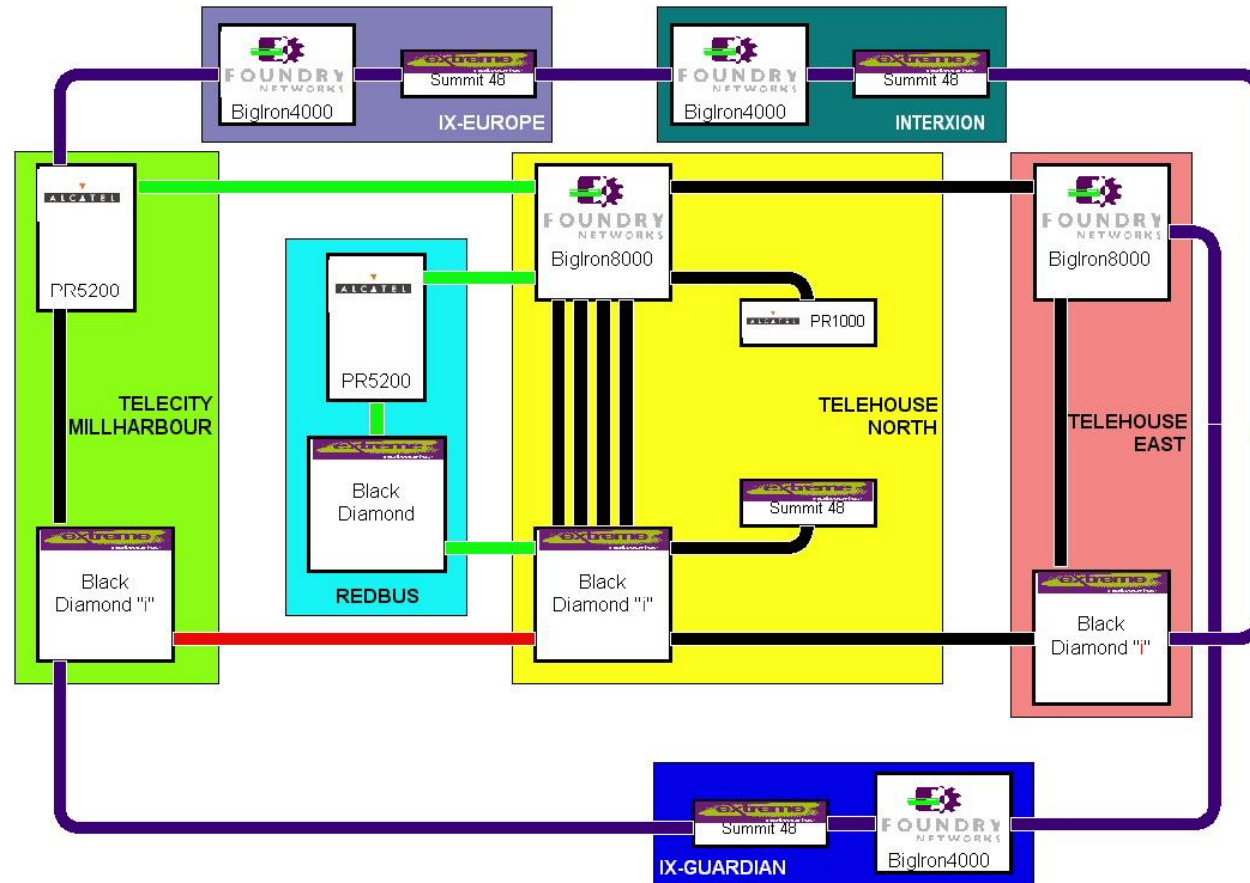

2024 Operations Approach

1994  LON1, Telehouse North

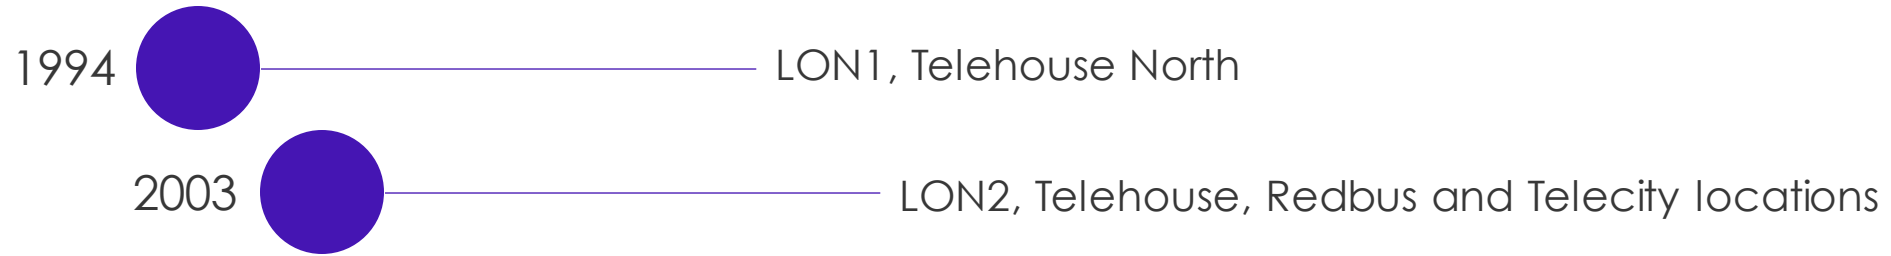

2024 Operations Approach

- In 2001, 7 years on from launch, we had a single LAN, **LON1**, we had **7 locations** across London, and we had equipment in **7 PoPs**, and **16 network devices**

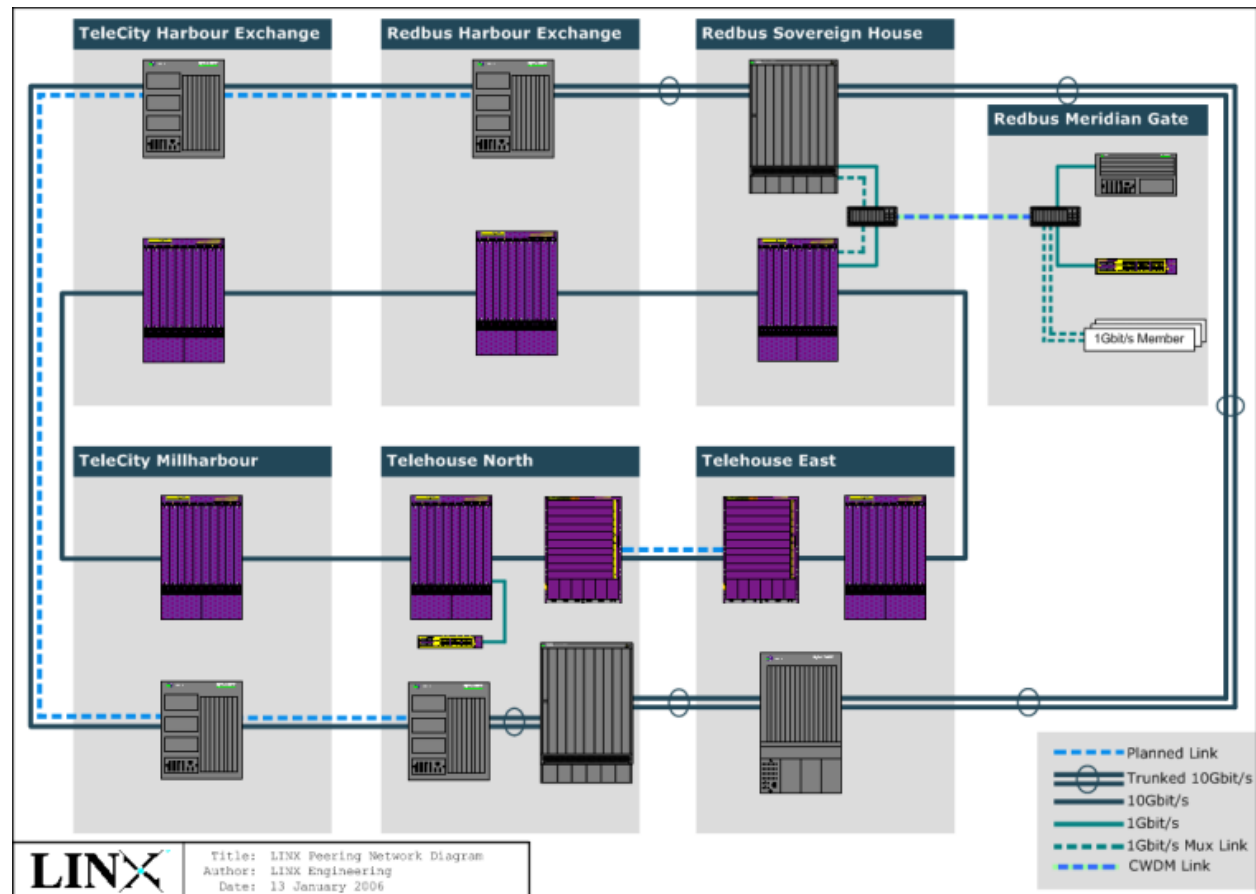

2024 Operations Approach

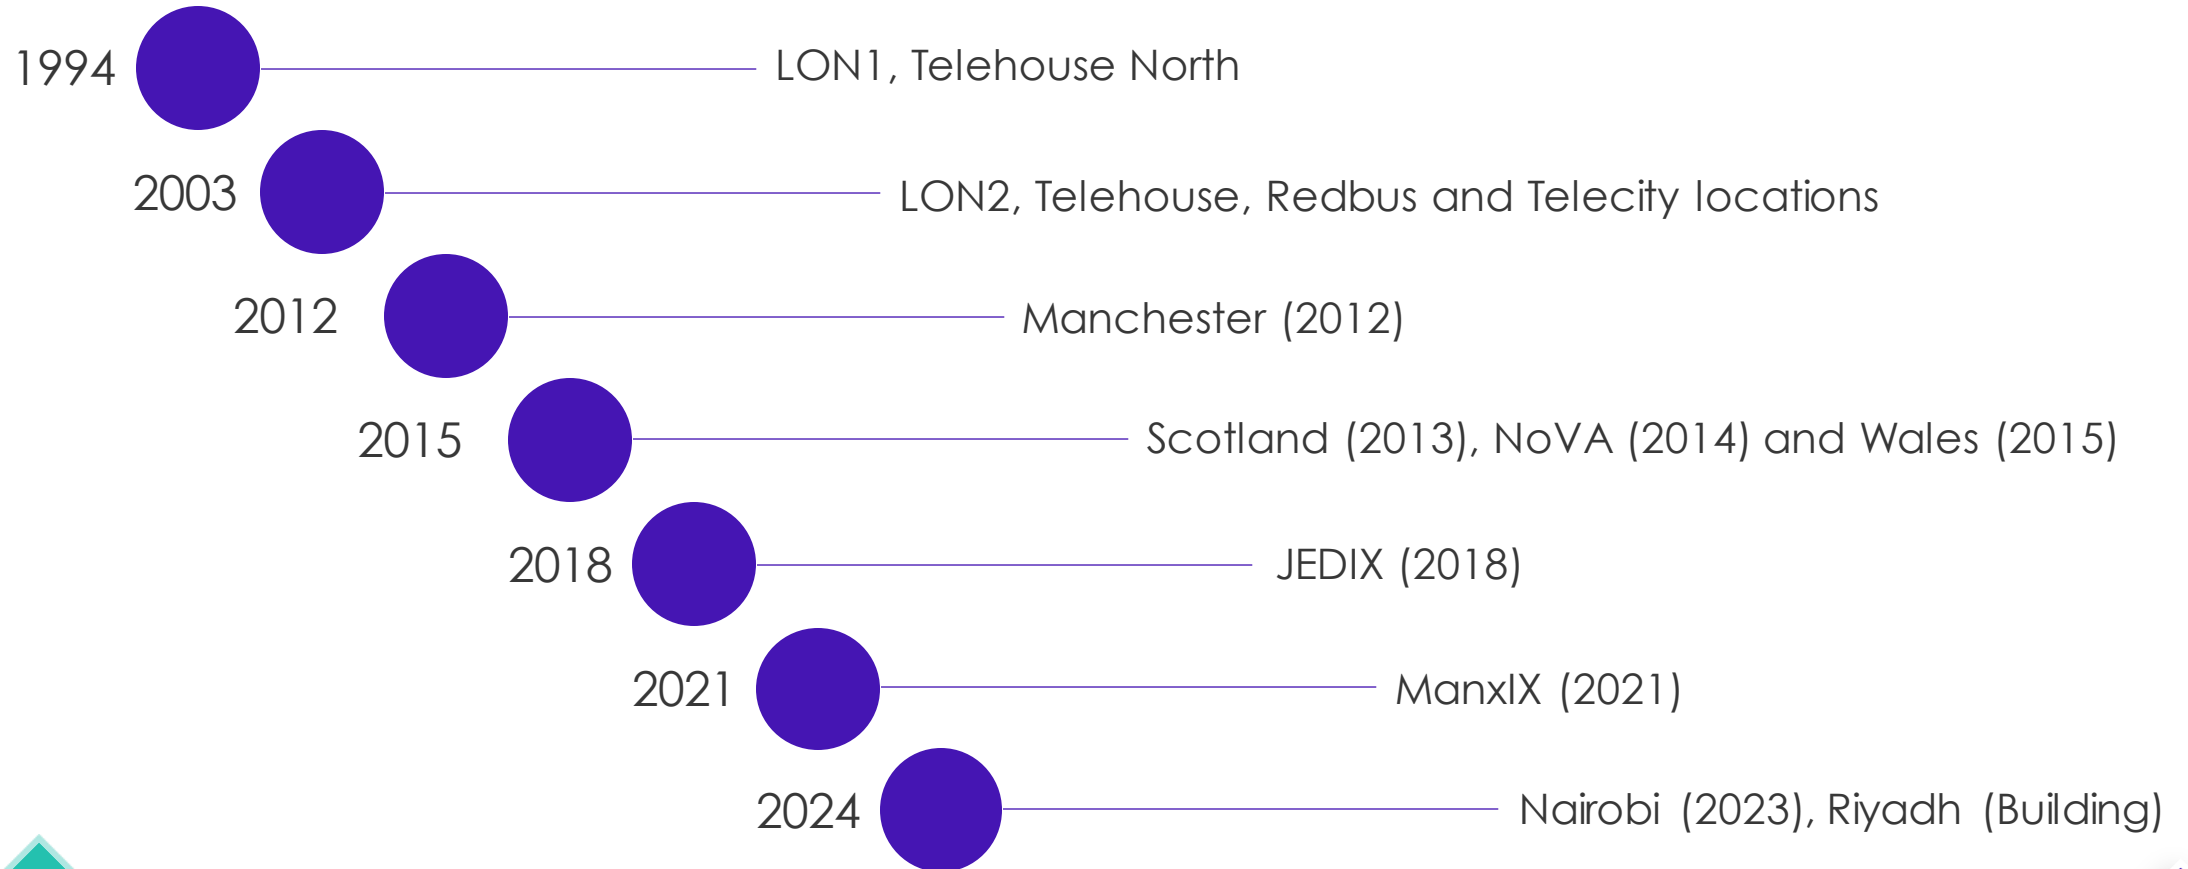

2024 Operations Approach

- In 2003 **LON2 launched**, by 2006 we had **2 LANs, 7 locations** and **13 PoPs**

2024 Operations Approach

2024 Operations Approach

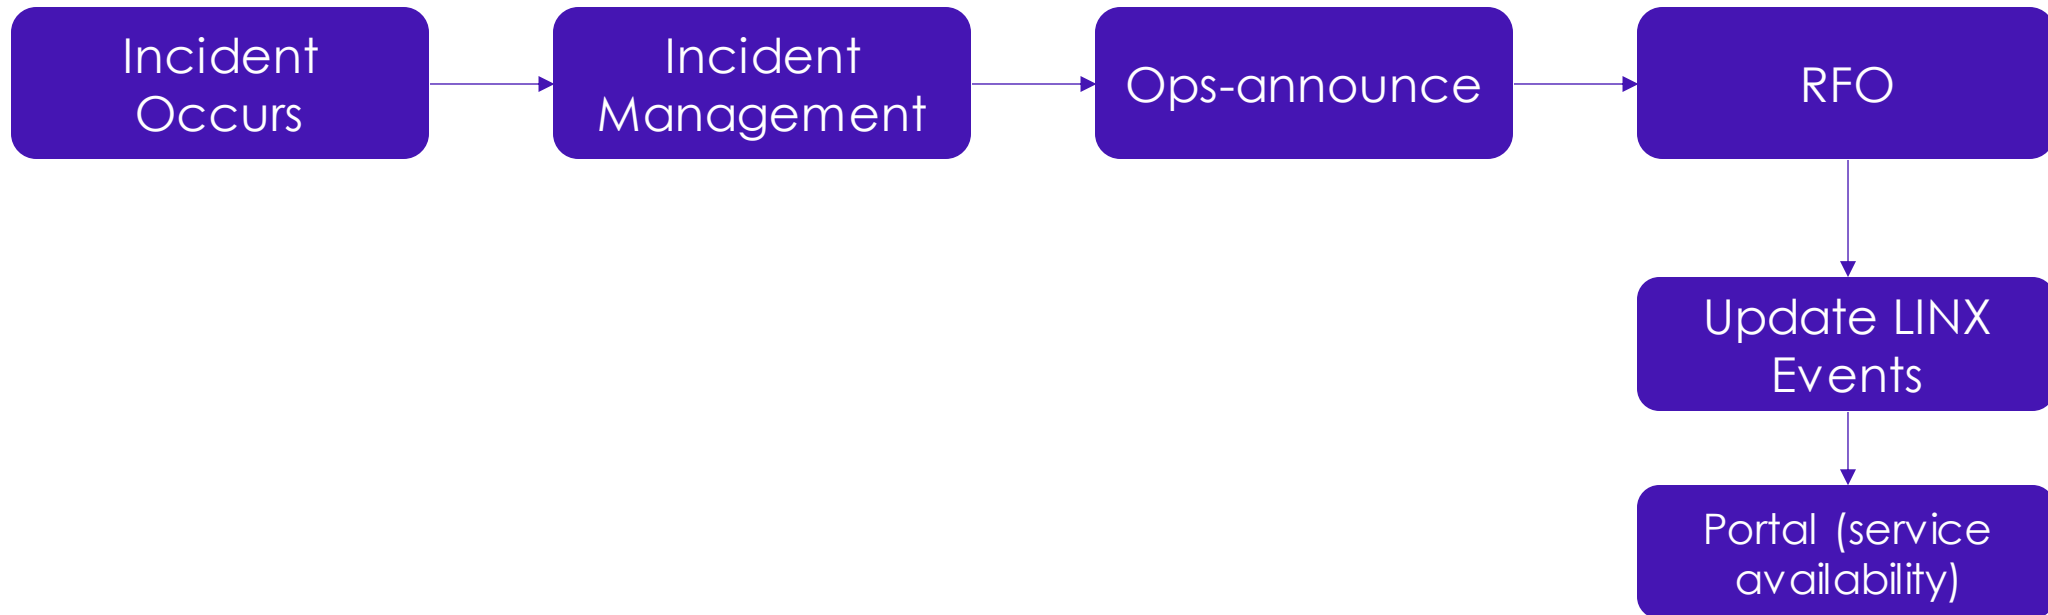

- In 2024, we have **10 LANs**, across many countries, covering **31 locations** and over **40 PoPs**, linking in some **49 buildings**, with well over **200 network devices**.

2024 Operations Approach

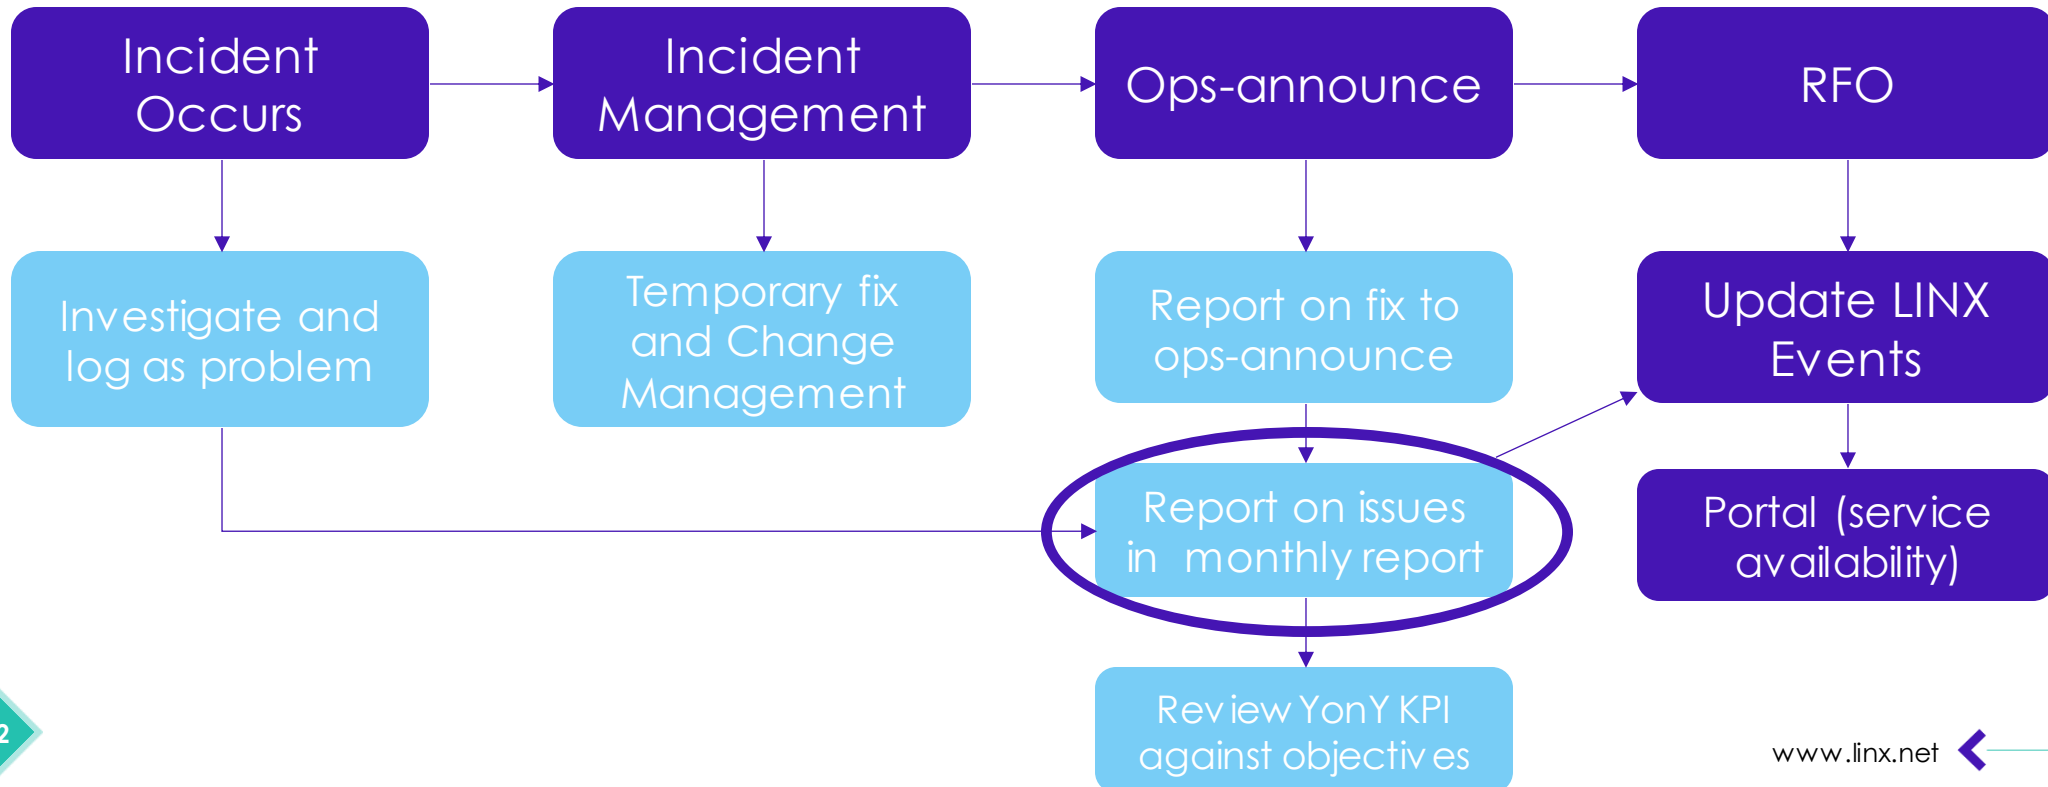

- Operations update covers mainly incidents and reason for outage (RFO) reports

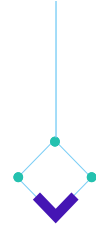

2024 Operations Approach

- Operations update covers mainly incidents and reason for outage (RFO) reports

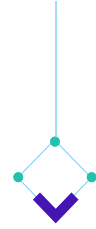

2024 Operations Approach

- Reflections from 2023 and how we present to the membership, on social media and at LINX events
- Evolution of LINX, our peering LANs and geographical presence
- New tools and communication..

LINX Community

2024 Operations Approach

- LINX Community, full presentation tomorrow and member communication to follow
- Ideas on improving operational insights ..
 - Maintenances will be auto linked from our in-house operations tool to community, what you see in email will appear in community
 - Ability to join LAN groups
 - Ability to post, comment and respond to engineering posts
 - Ability to tell us what is important to you

Engineering Incidents - LINX121

What would you like to hear more about? We have seen incidents and problems across these Exchanges since our last briefing:

- LINX Scotland [December] - Issue with edge1-dvg-sco1
 - The device went unreachable via our management network
 - IP Infusion recommended reboot
- LON1 [December] - edge1-thn drops
 - Traffic disruption on edge1-thn (Telehouse North) between 2:25 - 3:18 UTC
 - DDoS on member port, amplified by Juniper line card bug (Agent Smith)
- LON1 [December] - Packet drops on edge4-the
 - Fault found on Juniper line card
 - Service restored by swapping out the faulty line card with a spare as per our vendor TAC's advice. Card returned.
- SYSTEMS [January] - LINX Portal Unreachable
 - DDoS attack on LINX infrastructure, specifically boarder routers
 - No member traffic impact, some management reachability issues
- LON2 [February] - Issue with edge4-thw-lon2
 - Management interface stopped passing traffic, member traffic unaffected
 - Device had to be rebooted under emergency maintenance to resolve, escalated to IP Infusion

Incidents

Incidents

- DDoS attack on LINX, reported in some media channels, no impact to member traffic, LINX monitoring systems or data integrity.
- **Date:** 12/1/2024
- **Duration:** 20:00 through to 06:00 (13/1/2024)
- **Trouble Shooting:** Incident bridge formed, attack appeared to be directly on our boarder routers. The attack was a multi-source UDP flood on port 179. Bandwidth allocated for LINX staff traffic increased to help mitigate
- **Improvements:** Source a third-party DDoS mitigation solution to protect ourselves from DDoS attacks which saturate our uplinks for staff traffic.

Incidents

- DDoS attack on LINX, reported in some media channels, no impact to member traffic, LINX monitoring systems or data integrity.

LON1 Update

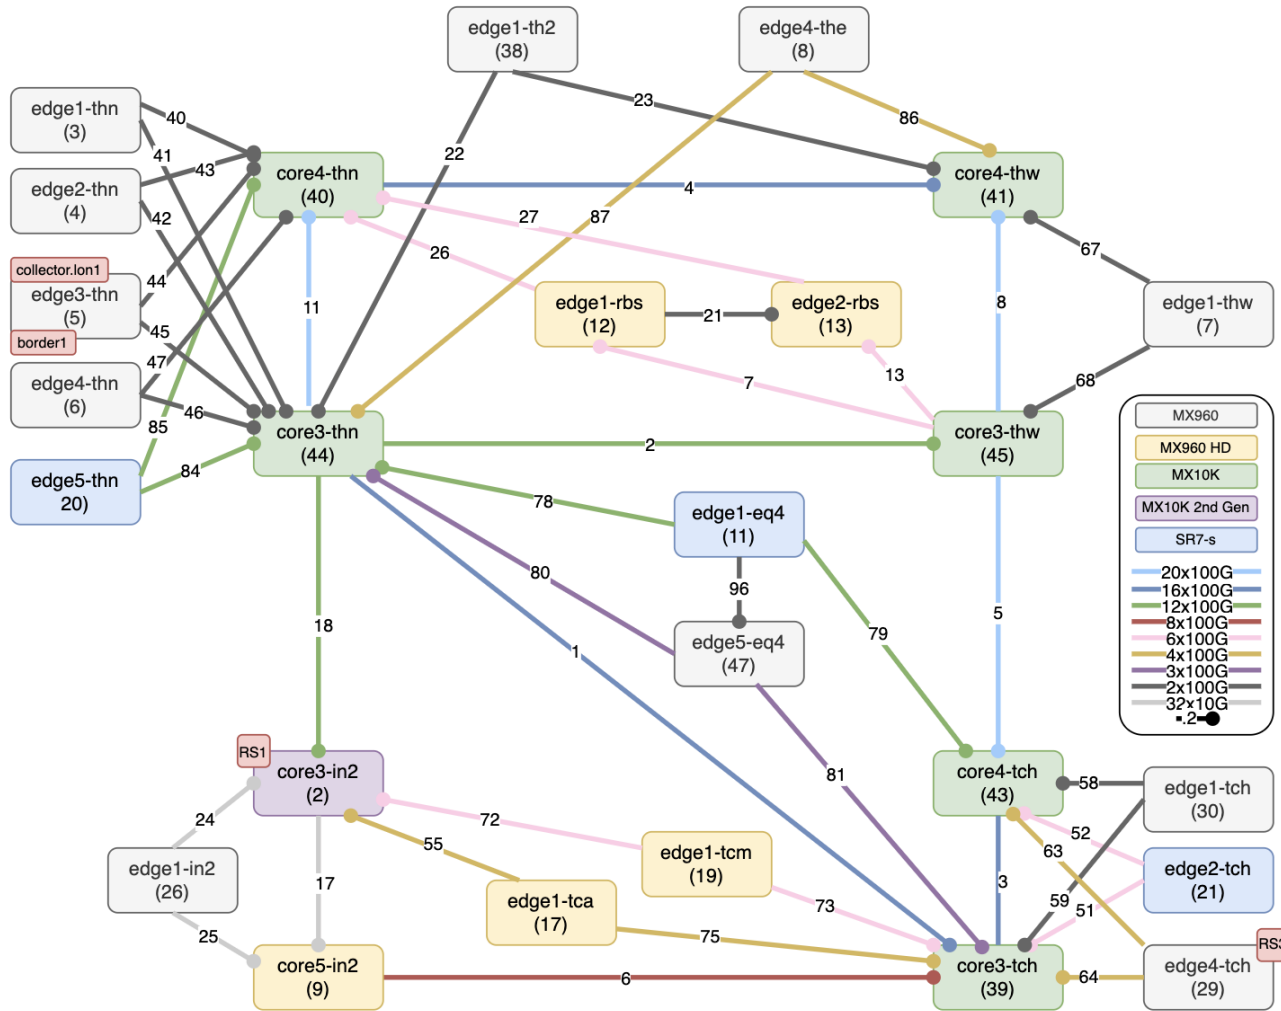

LON1 Update

- At LINX119 we gave an update on the need to replace the legacy Juniper MX960 devices
- This project started in 2023 with the actual change work starting in January 2024 and it will run through to June 2024
- The goal is to allow for us to increase our delivered capacity whilst maintaining our space footprint, reducing our cost for support and for power on a per GB delivered basis
- This returns value to the membership

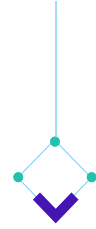

LON1 Update

- 2023 topology, LON1, router view only

LON1 Update

- Maintenance work completed
 - THW
 - TCH
 - IN2 (all members migrated at this site, ISL move to be completed end of next week)
- Maintenance work planned
 - Maintenance next Thursday night after LINX meeting, that will migrate IN2 fibre and decommission the MX960s where we have migrated members
This will remove 5xMX960s from the network
 - After that we will concentrate on THN, edge 1-thn migration last week Feb/early March

LON1 Update

Planning

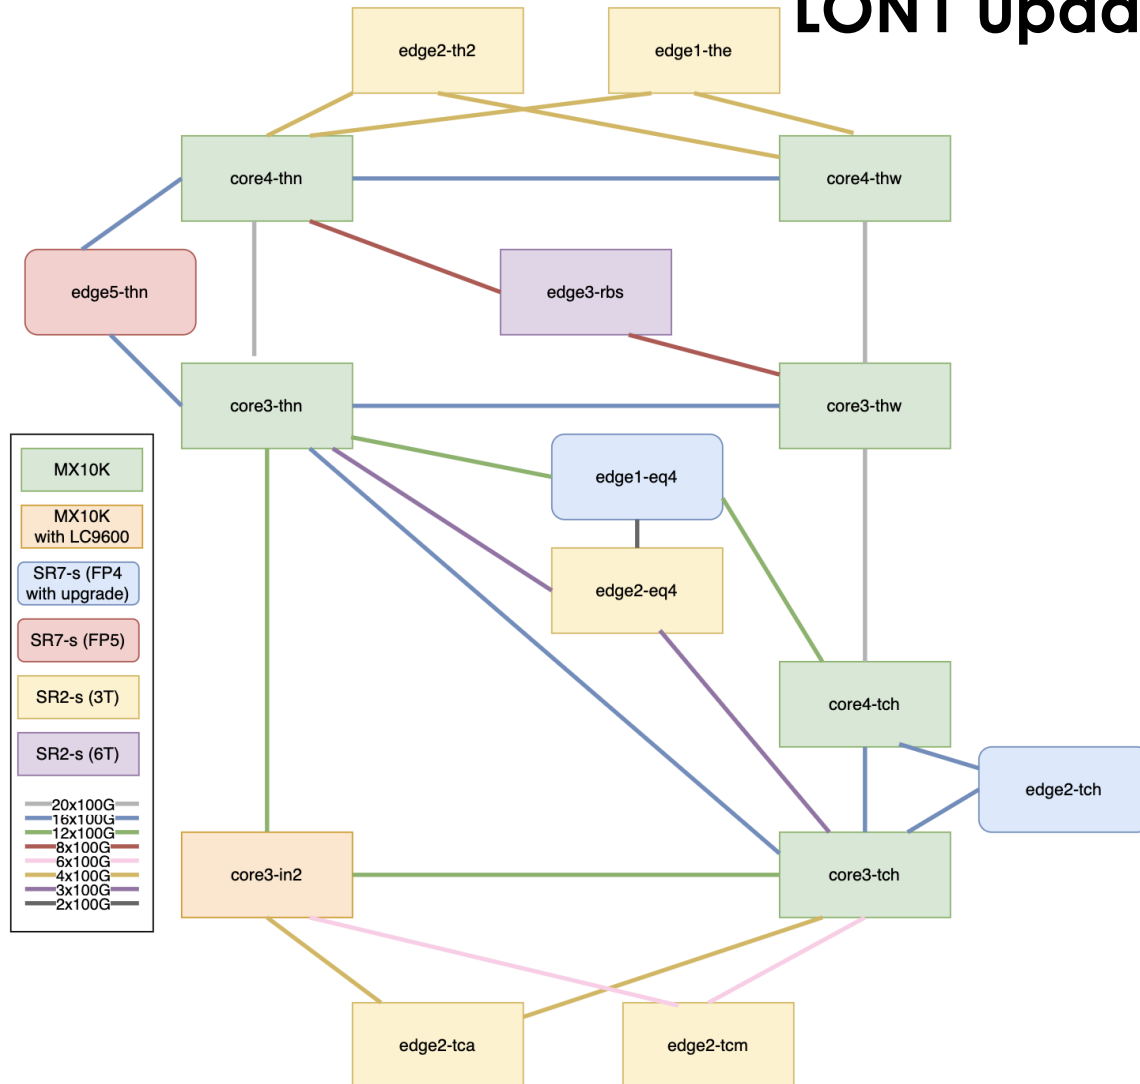

- **March**
 - Upgrade of THN SR7 chassis and deployment of FP5 cards
Further member migrations in THN - moving 1G/10G members to the MX10Ks and 100G members to the SR7
- **April**
 - Complete THN migrations
 - Begin deployment of SR-2se's (enables 400G at these sites)
 - RBS migration
 - TCM migration
 - TCA migration
- **May**
 - THE migration
 - TH2 migration
 - EQ4 migration
- **June**
 - Snagging and documentation clean up, ISO readiness

LON1 Update

- Target 2024 topology, LON1, router view only

Route Serves

Route Serves

- All OpenBGPd route-servers have now been upgraded to v8.3
 - Lab testing for use on LON1 currently underway (8.3)
- BIRD2 upgrades have started with LINX Wales completed.
 - SCO1, LON2 and LON1 maintenances to follow soon
- Remotely Triggered Black Hole (RTBH) will be available once all BIRD upgrades are completed
- Alice Looking-Glass has been upgraded to version 6 and tested with BIRDv2 and OpenBGPd 8.3 successfully

Thank you
