Peering and More

More than just remote peering

Home » Services

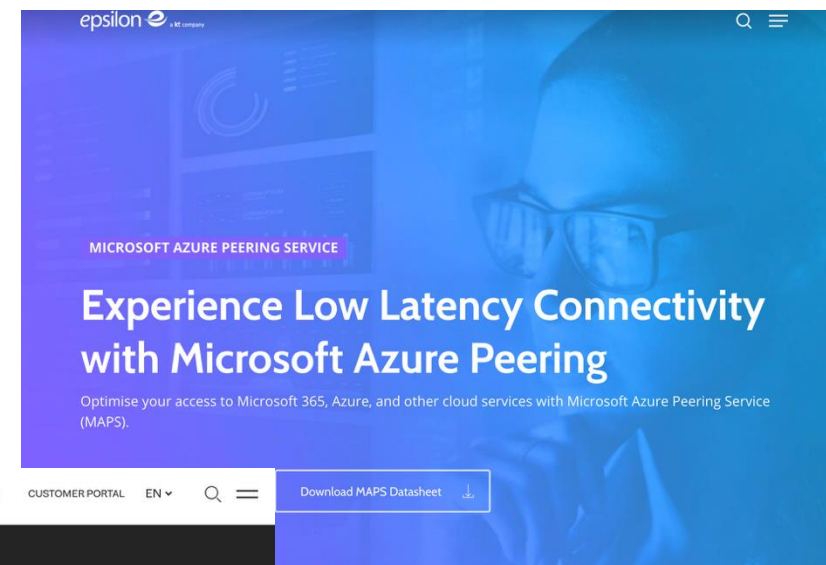

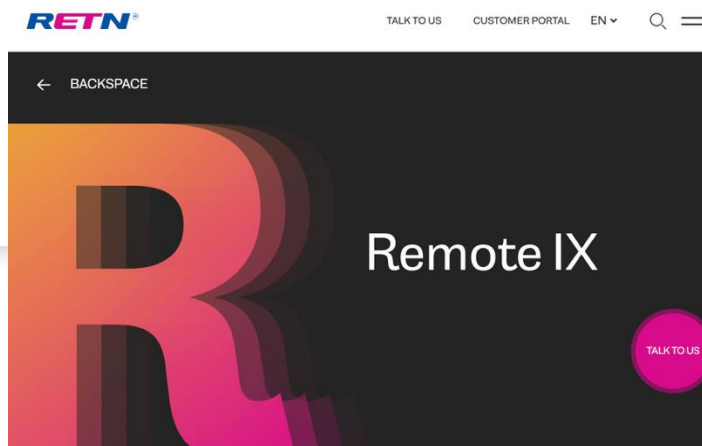

Peering

Peering is when two or more networks connect directly to exchange internet traffic, making it faster, and more efficient, reducing latency, lowering transit costs, and improving network reliability and speed.

At LINX, members can connect with hundreds of other networks through a trusted, high-performance platform. This direct interconnection improves network performance, enables greater control over traffic flows, and makes it simple to expand connectivity as demand grows.

Congratulations!

Top Reseller for Additional Services

January to December

2024

Congratulations!

Megaport

LINUX Community Ambassador

January to December

2024

Congratulations!

The Epsilon logo is centered within a white diamond shape, which is itself inside a larger, slightly offset teal diamond. The word 'epsilon' is written in a black, lowercase, sans-serif font. To the right of the text is a stylized purple 'e' logo, which consists of a thick, curved line forming a partial circle with a small gap at the top.
