Prices

Prices are determined by the LINX membership. Because LINX is a mutual non-profit company it can give members the best prices as there are no share holders to please. This ensures that all members are treated equally and all are quoted the same fees which are made public on our website.

This ensures our members get the best possible value for money.

Port / Size	1G	10G	100G
LON1	No Charge (£219)	£638	£3596
LON2	No Charge (£97)	£360	£2277
LINX Manchester	No Charge (£80)	£270	£1350
LINX Scotland	No Charge (£80)	£270	£1350
LINX Cardiff	No Charge	No Charge	£POA
LINX NoVA	No Charge	US$425	US$2720

The LINX membership fee is payable by all members and, for 2018, remains at £1200 per annum. Each port order or port move has an installation charge.

Members are currently benefiting from the first 1G port on every peering LAN, totalling a maximum of 6GE of peering capacity, included as part of their membership fee.

About the London Internet Exchange

The London Internet Exchange (LINX) is one of the largest Internet exchange points in the world. By connecting at LINX, networks have the opportunity to connect to over 800 ASNs worldwide, giving access to direct routes from a large number of diverse international peering partners.

Why Peer?	Why Join LINX?
• Cost effective solution • Can reach many networks at once • Adds resilience to your network • Improves latency	• Able to reach 85% of global routing table • Quarterly member meetings to facilitate new peering arrangements • Route server with over 60 thousand routes with a single connection • Your regulatory interests represented by our public affairs team • Mutually owned by our membership so kept commercially competitive

The LINX Network

LINX run dual LANs in London to give members added resiliency as they can take duplicate ports on both LANs. The LANs run on different vendor equipment, so that even in the event of a vendor originated outage, our members are able to transfer traffic over to a LAN that will not be affected by the same problems.

Both LANs span a 64km metro area serviced by 16 PoPs from multiple carrier neutral datacentre operators.

Regional Peering

LINX also run a separate LAN in the north west of England under the brand LINX Manchester for members wishing to exchange traffic locally in that region. There are also sites in Edinburgh, known as LINX Scotland, LINX Cardiff in Wales and another in Northern Virginia, called LINX NoVA. You do not need to join LINX multiple times to connect at these sites, as one membership allows you to take ports on any of the LANs.

These regional exchanges are designed to keep traffic local and support regional peering communities.

LINX Private Interconnect

LINX can provide members a service that allows them to connect directly to other members who are located in the same colocation site. This allows them to divert important traffic away from the main exchange and place it on a dedicated connection offering the member more control of specific network traffic.

Rack space

LINX has a supply of colocation rack space available to resell to members in popular London datacentres. This can be offered to members at a reduced rate providing a member with a strong foothold within the London colocation scene.

Route server

Members can join the LINX route server through a single arranged peering session thereby providing them access to over 300,000 routes. LINX has some of the largest route servers of an Internet exchange in the world.

How to get involved?

Members of LINX can connect to the exchange in one of three different ways:

Physical Router	Layer 2 Connection	VLAN
You can connect via physical router in any of LINX's 16 London PoPs. LINX's network topology can be found here: www.linx.net/about/our-network	You can also make a Layer 2 connection to a direct port in London with one of our Layer 2 carrier LINX from Anywhere partners. View our LINX from Anywhere page here: www.linx.net/join-linx/connecting-remotely/linx-from-anywhere	Another option is a VLAN on one of our ConneXions reseller partner ports. Visit our ConneXions page on the LINX website: www.linx.net/join-linx/connexions
