

JEDIX

Background

- > In September 2018 LINX got contacted by STC to see if we would be interested in taking part in a competitive process for operating an IXP in STC's data centre in Jeddah
- > LINX board discussed the opportunity and decided that LINX should take part in the process
 - And established a set of criteria for LINX to take part
- > LINX made a bid based on the LON2 disaggregated architecture
- > In December STC notified LINX we had won the bid

What are we doing?

- > LINX is building JEDIX on behalf of STC
- > LINX will operate JEDIX on behalf of STC
 - Manage sales and marketing together with STC
 - Manage the order process
 - Manage provisioning
 - Monitor and manage JEDIX from the LINX NOC

Why JEDIX?

- > LINX board believes JEDIX will benefit members by establishing an IXP in a previously underserved region
- > JEDIX builds on existing LINX processes, tools and relationships so adds further economics of scale
- > JEDIX does not pose a financial risk or investment for LINX

Where is JEDIX?

- > JEDIX is located at the STC owned, but neutral datacentre in Jeddah
- > Datacentre sales is managed by STC

How do I order JEDIX ports?

- > You contact LINX Business Development or Member Relations as normal – or order it in the portal
- > The contract will be with STC – not LINX
 - All interactions will be with LINX staff
