

Prices

Prices are determined by the LINX membership. Because LINX is a mutual non-profit company it can give members the best prices as there are no share holders to please. This ensures that all members are treated equally, get the best possible value for money, and all are quoted the same fees which are made public on our website.

Port / Size	1G	10G	100G	400G
LON1	No Charge (£197)	£488	£2750	£5400
LON2	No Charge (£87)	£275	£1742	POA
LINX Manchester	No Charge (£72)	£207	£1033	POA
LINX Scotland	No Charge	No Charge	£1033	POA
LINX Wales	No Charge	No Charge	£1033	POA
LINX NoVA	No Charge	\$353	\$2261	POA

All LINX members need to pay a LINX membership fee, as well as a monthly fee for their port dependant on its size / location. The fees for LINX services are defined at the LINX EGM which takes place every November.

Annual Membership Fee: £1200

The basic service taken by our members are the ports to connect to our switches. This allows each member to publicly peer with any other member by mutual agreement.

We offer multiple capacities between 100Mb and 100GigE. We also allow link aggregated 1GE and 10GE ports by arrangement.

The London Internet Exchange

Uniting Networks.
Igniting the Internet.

About the London Internet Exchange

The London Internet Exchange (LINX) is one of the largest Internet exchange points in the world. By connecting at LINX, networks have the opportunity to connect to over 960 ASNs worldwide, giving access to direct routes from a large number of diverse international peering partners.

Why Peer?

- Cost effective solution
- Can reach many networks at once
- Adds resilience to your network
- Improves latency

Why Join LINX?

- Three member meetings a year to facilitate new peering arrangements
- Route server with over 65,000 routes with a single connection
- Your regulatory interests represented by our public affairs team
- Mutually owned by our membership so kept commercially competitive

The LINX Network

LINX run dual LANs in London to give members added resiliency as they can take duplicate ports on both LANs. The LANs run on different vendor equipment, so that even in the event of a vendor originated outage, our members are able to transfer traffic over to a LAN that will not be affected by the same problems.

Both LANs span a 64km metro area serviced by 16 PoPs from multiple carrier neutral datacentre operators.

Regional Peering

LINX also run a separate LAN in the north west of England under the brand LINX Manchester for members wishing to exchange traffic locally in that region. There are also sites in Edinburgh in Scotland, Cardiff in Wales as well as another called LINX NoVA in Northern Virginia, USA. You do not need to join LINX multiple times to connect at these sites, as one membership allows you to take ports on any of the LINX LANs.

We can offer connection to JEDIX in Jeddah via our partner Saudi Telecoms Company (STC). These regional exchanges are designed to keep traffic local and support regional peering communities.

LINX Private Interconnect

LINX can provide members a service that allows them to connect directly to other members who are located in the same colocation site. This allows them to divert important traffic away from the main exchange and place it on a dedicated connection offering the member more control of specific network traffic.

Rack space

LINX has a supply of colocation rack space available to resell to members in popular London datacentres, as well as Manchester and LINX NoVA. This can be offered to members at a reduced rate providing a member with a strong foothold within the local colocation scene.

Route server

Members can join the LINX route server through a single arranged peering session thereby providing them access to multiple routes. For example, connecting to the LON1 route servers alone will provide close to 200,000 prefixes. These consist of a varied selection of large and small networks, content and eyeball networks etc. LINX perform prefix validation on all prefixes being propagated through the route servers, providing an additional layer of security against prefix leaks or hijacking.

How to get involved?

Members of LINX can connect to the exchange either directly or remotely via LINX ConneXions partner:

Connect to LINX Directly

If you have, or are planning to host equipment in one of the London datacentres where LINX is present, you are able to connect directly to one or both of LINX's peering LANs. Simply apply for membership and then our sales team will guide you through the joining procedure. From there all you need to do is run a cross connect from your equipment to ours.

More details available here:
www.linx.net/connecting-directly

Connect to LINX Remotely

If you don't have equipment in London, don't worry! LINX works with a number of industry partners who bring networks to London via their own infrastructure, dropping them off on the exchange so that they can still enjoy the full benefits of peering at LINX without the need to have a physical presence in London.

To learn more please visit our remote connection page on the LINX website:
